

What happens if I attempt to map a number larger than 32767 to an ASFixed value?

Using a number larger than 32767 overflows the ASFixed type. A value of 32767 indicates that the number has been overflowed.

Adobe PDF Library has moved away from using the ASFixed values, despite the performance benefits from using them, because of this potential to easily overflow type. There are functions that take ASDouble-based parameters, where previous versions took ASFixed-based parameters.
