

Adobe PDF Library: System Management and Processes

- Are there any problems nesting try/catch blocks and DURING/HANDLER blocks, especially using Visual Studio .NET?
- Can I extend the .NET interface to include APDFL functions that are not yet supported?
- Can the APDFL Java interface be used on CentOS?
- I'm building an Adobe PDF Library application, not a plug-in. Should I use the HFT init or the PLUGIN definition used by the Library sample programs?
- Is a digitally signed version of the PDF Library available?
- When does the Library read into memory the resources for a PDF page, and when will it release those resources from memory?
- When building my APDFL app, can I shorten the Struct Member Alignment in the Code Generation entry of my Visual Studio project properties?
- Why does PDPAGEAcquirePDEContent API occasionally return a NULL?
- What happens if I attempt to map a number larger than 32767 to an ASFixed value?
- Why does Adobe PDF Library use five digits of precision?
