

# Adobe PDF Print Engine (PPE)

Datalogics offers the Adobe PDF Print Engine as a Software Development Kit (SDK). This product is used for managing the workflow for printing PDF documents.

A PPE toolkit includes the JDF Print Processor and the Adobe Common Renderer.

The JDF Print Processor processes incoming JDF job tickets. It acts as the controller for the print engine and includes messaging services for interacting with external systems.

Adobe Common Renderer is controlled by the JDF Print Processor. The Renderer offers trapping, imposition, rasterizing to a target device, and advanced color management.
