

Adobe Content Server

The Adobe Content Server (ACS) is a server-based eBook Digital Rights Management (DRM) platform. Digital Rights Management technology is used to protect electronic content. Datalogics customers, commonly bookstores, libraries, and other distributors of digital content (eBooks), use ACS to deliver eBooks to their own customers. Then, that protected PDF or EPUB content can be read on mobile devices, desktops, and dedicated devices using readers like Adobe Digital Editions, DL Reader, and customer viewers created based on Adobe Reader Mobile SDK.
